Figma, Pixso
Node.js, NestJS
TypeORM, Prizma, Docker

Languages

English - A2
Russian, Belarusian

About me

An ambitious junior frontend developer, a former lawyer who suffers from paperwork and bureaucratic procedures. My true calling has always been to create something new and inspiring. This aspect of programming attracted me the most - the opportunity to translate my ideas into a working application and see the result of my work.

My main focus in frontend development is React, and I strive to immerse myself fully in this technology. However, I am not accustomed to resting on my laurels, so in my free time, I actively broaden my horizons in the world of programming.

Education

Belarusian State Economic University   2011-2016
Lawyer (higher education)

The Rolling Scopes School   Jan - Sept 2023
JavaScript/Front-end

Writing web applications using vanilla JS. I created several individual projects, such as a virtual keyboard, the Minesweeper game, an application for learning CSS selectors, etc. I also gained experience working in a team during the creation of an online store.

The Rolling Scopes School   Oct 2023 - Jan 2024
React

Developed applications using React. Worked in a team on an application for queries via GraphQL with authorization via firebase. I was introduced to Next.js and its server-side rendering capabilities.

The Rolling Scopes School   Jan - Apr 2024
NodeJS

Creation of a number of individual projects: a file manager, a server part of the game "Battleship" using WebSocket, a music library API using Nest.js.
